

A BRIEF INTRODUCTION TO TI-89 GRAPHING CALCULATORS

BY JAY SCHIFFMAN AND ABDUL HASSEN

Our intention here is to make the introduction brief. We have assumed familiarity with the calculator's keyboard. For the sake of brevity we have omitted explanations and limited examples to basic types. We have used tables to describe the sequence of keys to press for a desired operation. For example, to solve an equation we first press **F2** and then choose the option **1:solve(**. In the table we have expressed this by writing **F2 1**. As another example, **F2 4 F2 9 1** means first **F2** then **4:zeros(** then **F2** followed by **9:Trig** and lastly **1:tExpand(**. (See the last row of the table in Section 1 below.)

Note that most built-in functions can be found by pressing **CATALOG** followed by the first letter of the desired command. One can then choose the command by scrolling down, if necessary, using the down arrow.

First some general commands. To clear the **HOME SCREEN** we use **F1 8**. For alphabets, first press the **ALPHA** button followed by the desired alphabet. Pressing **CLEAR** (once or twice) will delete every thing on the input line (at the bottom of the **HOME SCREEN**). To go back to the **HOME SCREEN** use either **ESC** or **QUIT**. To obtain an approximate value (in decimals) use the **GREEN DIAMOND** followed by **ENTER**. To evaluate factorials, type the number followed by **GREEN DIAMOND** followed by the **DIVISION** key.

A more detailed manual is underway. A preliminary version of the detailed manual can be obtained by contacting Professor Jay Schiffman of the Mathematics Department.

1. Algebra

All the algebraic commands are in the **F2** menu. Here is a list of some of them. The **EXAMPLE** column shows the format you should be using to enter the problem in the calculator.

To	TI 89 MENU	EXAMPLES	TI 89 ANSWER
Solve equations	F2 1	$\text{solve}(x^2+5x+4=0, x)$	$x=-1 \text{ or } x=-4$
Solve equations (with complex solutions)	F2 A 1	$\text{Csolve}(x^4+3x^2+1=0, x)$	$\frac{\sqrt{5}+1}{2} \cdot i \text{ or } -\frac{\sqrt{5}+1}{2} \cdot i \text{ or } \frac{\sqrt{5}-1}{2} \cdot i \text{ or } -\frac{\sqrt{5}-1}{2} \cdot i$
Solve inequalities	F2 1	$\text{solve}(-2x+5>7, x)$	$x < -1$
Solve for a variable in terms of another	F2 1	$\text{solve}(3x+2y=6, y)$	$y = \frac{-3 \cdot (x-2)}{2}$
Factor expressions	F2 2	$\text{factor}(x^3-5x^2+6x, x)$	$x \cdot (x-3) \cdot (x-2)$
Factor expressions with complex factors	F2 A 2	$\text{cFactor}(x^2+25, x)$	$(x+5 \cdot i) \cdot (x+5 \cdot i)$
Add fractional expressions	F2 6	$\text{ComDenom}(1/(x+1)+2/(x+3))$	$\frac{3 \cdot x+5}{x^2+4 \cdot x+3}$
Expand expressions	F2 3	$\text{Expand}((x+y)^3)$	$x^3+3 \cdot x^2 \cdot y+3 \cdot x \cdot y^2+y^3$
Find the zeros of polynomials	F2 4	$\text{Zeros}(2x^3-3x+1, x)$	$\{1, \frac{\sqrt{3}-1}{2}, \frac{-(\sqrt{3}+1)}{2}\}$
Find zeros of expressions involving trigs	F2 4 F2 9 1	$\text{Zeros}(t\text{Expand}(\cos(x)+\sin(2x)), x)$	See below
Evaluate Expressions at a point	 (from the keyboard)	$(x^2+1) _{x=2}$	5

To solve $x^2 + 5x + 4 = 0$.

Factoring $x^4 - 16$.

To solve $\cos x + \sin(2x) = 0$.

Note that the entire input and output are not displayed for the solution of $\cos x + \sin(2x) = 0$. To view the rest of the answer, use the up arrow and then the right arrow. Note also that the answer has $2@n2\pi$. This means $2n\pi$ where n is any integer.

2. Graphs

To plot graphs, make sure the **MODE** is on **FUNCTIONS**(or a desired option such as **PARAMETERIC** or **POLAR** or **3D**) To plot the graph of a function, press the **GREEN DIAMOND** button followed by **Y=** (which is the **F1** button). Type your function and press **ENTER**. Then press **GREEN DIAMOND** button followed by **F3**. If the graph is not displayed properly, press the **GREEN DIAMOND** button followed by **F2**. Now adjust the windows as desired. Note also that you can use **ZOOM** options of the calculator by pressing **F2** immediately after you typed your function and pressed **ENTER**. If all else fails, use **F2 A**(for ZoomFit).

Once you have your graph displayed, **F5 MATH** menu has several options that allow us to analyze graphs of functions such as finding the zeros, minimum or maximum, intersection points, tangent lines, and so on. **F4** is used to select or deselect a function. Simply use the up or down arrow to highlight the function to be selected or deselected and press **F4**. We leave it to the reader to explore the other menus. Section 1.4 of the Calculus (by Stewart) textbook is the best source of examples of graphs and the importance of windows.

The graph of $y = x^3 - 3x + 2$

The graph of $y = \sin(x/10)$

We used $[-20\pi, 20\pi] \times [-2, 2]$ window

Here is a long example. (Be patient!) Let us draw the graphs of $f(x) = x^3 - 3x - 2$, $g(x) = x^2 - 4$, and $h(x) = -2x + 1$. We will use $y1$ for $f(x)$, $y2$ for $g(x)$, and $y3$ for $h(x)$. After typing each expression, press **ENTER**. Then press **GREEN DIAMOND** button followed by **F3** to display the graph. Here are the input and the graph displays:

Suppose we want to find the intersection points of $g(x)$ and $h(x)$. This means we do not need $y1$. So we deselect $y1$ and graph the two functions. While we are in the graph display, press **F5 5**. Notice the number 2 at the right top corner of your calculator. This refers to $y2$. You will be asked for "1st curve?" Press **ENTER** to select $y2$ and **ENTER** again to select $y3$. Next you will be asked for a "lower bound?" As we can see from the graph there are two intersection points. One of the intersection points is between -4 and -3 and the other one is between 1 and 2 . To find the one between -4 and -3 , we can use -5 for "lower bound?" and thus type

-5 and press **ENTER**. For the “upper bound?” press 0 and **ENTER**. The following are the results of the steps described above.

The answer is $x = -3.44949$ and $y = 7.89898$. We leave it to the reader to find the other intersection point and also to find the intersection points of $f(x)$ and $g(x)$.

3. Calculus

All the calculus commands (limit, derivative, integration, and so on) are in the **F3** menu. Here are some examples

To:	TI 89 MENU	Example	ANSWER
Find limit	F3 3	$\text{limit}(x^3-3x-1, x, 1)$	-1
Find right-sided limit	F3 3	$\text{limit}(\text{abs}(x+3)/(x+3), x, -3, 1)$	1
Find derivative	F3 1 or [2nd] 8	$d(x^2, x)$	$2x$
Find derivative at a point	F3 1 or [2nd] 8	$d(x^2, x) _{x=2}$	4
Higher order derivative	F3 1 or [2nd] 8	$d(x^7, x, 3)$	$210 \cdot x^4$
Find integral	F3 2 or [2nd] 7	$\int (x^2, x)$	$\frac{x^3}{3}$ (note the absence of +C)
Find definite integrals	F3 2 or [2nd] 7	$\int (x^2, x, 0, 1)$	$1/3$
Sum	F3 4	$\sum (2k-1, k, 1, 10)$	100
Arc Length	F3 8	$\text{arcLen}(x^2, x, 0, 5)$	$\frac{\ln(\sqrt{101}+10)}{4} + \frac{5\sqrt{101}}{2}$
Taylor polynomial	F3 9	$\text{taylor}(e^x, x, 3)$	$\frac{x^3}{6} + \frac{x^2}{2} + x + 1$

Examples of one-sided limits:

Limit from the right

(Use **CATALOG** key to get **abs**(.))

Limit from the left

Two-sided limit

Examples of derivatives

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\frac{d}{dx}(x^2 \cdot e^x) \quad (x^2 + 2 \cdot x) \cdot e^x$					
d(x^2e^x),x)					
MAIN	RAD AUTO	FUNC	1/30		

First derivative

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\frac{d^5}{dx^5}(\sin(2 \cdot x))$					
d(sin(2x),x,5)					
MAIN	RAD AUTO	FUNC	1/30		

5th derivative

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\frac{d}{dx}(\sin(2 \cdot x)) \big _{x=\frac{\pi}{3}} \quad -1$					
d(sin(2x),x) x=pi/3)					
MAIN	RAD AUTO	FUNC	1/30		

Derivative at a point.

Examples of integration

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\int (x^2 \cdot \sin(x)) dx$					
f(x^2sin(x),x)					
MAIN	RAD AUTO	FUNC	1/30		

This does not give +C

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\int (x \cdot e^x) dx \quad (x-1) \cdot e^x + C$					
f(xxe^x),x,C)					
MAIN	RAD AUTO	FUNC	1/30		

Forcing + C

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\int_0^1 (x^2 \cdot e^x) dx \quad e - 2$					
f(x^2e^x),x,0,1)					
MAIN	RAD AUTO	FUNC	2/30		

Definite integral (How did we get the second answer?)

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\int_1^{\infty} \left(\frac{1}{x^2}\right) dx \quad 1$					
f(1/x^2,x,1,inf)					
MAIN	RAD AUTO	FUNC	1/30		

Convergent improper integral

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\int_1^{\infty} \left(\frac{1}{x}\right) dx \quad \infty$					
f(1/x,x,1,inf)					
MAIN	RAD AUTO	FUNC	1/30		

Divergent improper integral

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\int_{-1}^1 \left(\frac{1}{x}\right) dx \quad \text{undef}$					
f(1/x,x,-1,1)					
MAIN	RAD AUTO	FUNC	1/30		

Divergent improper integral

Examples of Summation:

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\sum_{n=1}^5 (2 \cdot n) \quad 30$					
S(2n,n,1,5)					
MAIN	RAD AUTO	FUNC	1/30		

Finite sum.

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\sum_{n=1}^{\infty} \left(\frac{1}{n^2}\right) \quad \frac{\pi^2}{6}$					
S(1/n^2,n,1,inf)					
MAIN	RAD AUTO	FUNC	1/30		

Convergent infinite series.

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\sum_{n=1}^{\infty} \left(\frac{1}{n}\right) \quad \sum_{n=1}^{\infty} \left(\frac{1}{n}\right)$					
S(1/n,n,1,inf)					
MAIN	RAD AUTO	FUNC	11/30		

Two divergent series (Note the different forms of the Answers.)

Examples of Arc Length and Taylor Polynomials

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\text{arcLen}(\sinh(x), x, 0, \pi) \quad 12.2175$					
arcLen(sinh(x),x,0,pi)					
MAIN	RAD AUTO	FUNC	1/30		

The length of the curve $y = \sinh x$ on the interval $[0, \pi]$.

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\text{taylor}(\cosh(x), x, 9)$					
taylor(cosh(x),x,9)					
MAIN	RAD AUTO	FUNC	1/30		

The ninth Taylor polynomial of $f(x) = \cosh x$ at $x=0$.

F1	F2	F3	F4	F5	F6
Tools	Algebra	Calc	Other	Pr3mID	Clean Up
$\text{taylor}(\sqrt{x}, x, 5, 1)$					
taylor(sqrt(x),x,5,1)					
MAIN	RAD AUTO	FUNC	1/30		

The fifth Taylor polynomial of $f(x) = \sqrt{x}$ at $x=1$.
